

Who

Kevin Raschke, Yanyu Xiong, Nathan Pottorf, Akira Youngblood

Title

GetLawyer

Description

User-friendly field-specific attorney search engine

Vision Statement

We intend to provide attorneys and clients a way to connect based on mutual criteria defined by the user.

Motivation

Simplify the process of finding and connecting attorneys and legal firms with the correct attorney.

Risks

- Little experience with building web pages.
 - Working on the webpage part together so we can pool our knowledge. Use online resources and in class education.
- Time
 - With trello we can always know what to do, meaning we can work alone efficiently, as well as in smaller groups.
- Getting sued by upset lawyers
 - Find the right lawyer for the job (using our own site) or be bought by a larger company that can handle being sued/find rich investors.
- New team, different schedules, different personalities
 - We plan on using an progress tracker to keep everyone on track and up to date. This will help minimize slacking and allow everyone to know what has been and still needs to be done.

VCS

- We will be using GitHub
- <https://github.com/GetLawyer/GetLawyer>

List of Requirements

User Requirements			
ID	Description	Agile Sizing	Priority
US-01	As a client, I want to be able to specify search criteria and easily find an attorney so that I can get the legal help I need.	8	Medium
US-02	As an attorney, I want to have a good looking profile so that a client can easily understand what services I offer.	5	Low
US-03	As an attorney, I want to be able to add profile details so that clients can find me.	5	High
US-04	As a client, I want to be able to create an account so that I can keep track of possible attorneys	3	Medium
US-05	As an attorney, I want to have the ability to login so that I can update my information as necessary.	3	High
US-06	As a client, I want be able to quickly find the contact information for the attorney I am interested in.	1	High
US-07	As a client, I want to be able to maintain a list of “saved” attorneys so that I can keep track of potential counsel.	2	Low

Functional requirements			
ID	Description	Agile Sizing	Priority
FN-01	Attorney account creation places attorney information in database	8	High
FN-02	Account login verifies user identity against database	2	Medium
FN-03	User search queries database and return results	5	High
FN-04	Account update modifies information in database	3	Medium
FN-06	Client account creation places client information in database	5	Medium
FN-05	Selected search result links to dynamically generated profile	2	High

Non-Functional requirements			
ID	Description	Agile Sizing	Priority
NF-01	The system needs to be accurate	3	High
NF-02	Search results should be well-organized	8	High
NF-03	Login page should be simple, easy-to-use	2	Medium
NF-04	Visually pleasing attorney profiles	3	Low
NF-05	Consistent site-wide look & feel (UX)	5	Low
NF-06	Performant database queries	3	Low

Project Tracking Software

Trello

Our project board is at <https://trello.com/b/LYUigGHX/getlawyer-main>

Project Plan

Project tracking managed in Trello

The screenshot shows a Trello board titled "GetLawyer Main" with a blue header bar. The board is organized into three columns: "Things to Start", "In progress", and "Done".

Things to Start Column:

- Build database (with a red progress bar)
- Part 2 (with a menu icon and a clock icon labeled "Jun 17")
- Part 3 (with a menu icon)
- Build Webpage (with a menu icon)
- Account creation page
- Attorney search page
- Attorney profile page
- Populate profile page from database
- Link account creation to database
- Client account page
- Learn HTML
- Add a card...

In progress Column:

- Part 1 (with a green progress bar, an eye icon, a menu icon, and labels AY, KR, NP, YX)
- Web hosting (with an eye icon, a checkmark icon labeled "0/1", and labels AY, KR)
- Add a card...

Done Column:

- Compile the "Things to Start" list (with a green progress bar, an eye icon, a checkmark icon labeled "2/2", and labels AY, KR, NP, YX)
- Add a card...
